Market Recap

The month of September was not a good one for the financial markets. The Dow shed -6.4%, while the Nasdaq lost -10.5%. The 2-year Treasury note, which began the month yielding 3.49%, climbed to a 15-year high of 4.34% in the final week of September, before rallying a bit into quarter end. The 10-year note opened the month at 3.19% and reached 3.94%, the highest since 2008, before finding its footing late in the month.

There are a number of contributing factors to the huge increase in bond yields last month; the most dominant is that Fed officials not only raised the overnight target rate by 75 basis points for the third straight time in September, but also indicated through the updated “dot plot” that they intend to hike rates further and keep them elevated for longer. By increasing the target rate 300 basis points since March, the Fed has tightened monetary policy faster than at any point in forty years. This has contributed to the strongest dollar in more than two decades, which makes U.S. imports cheaper and exports more expensive, and has a profound negative effect on the profits of U.S. multinational companies.

But the more severe damage is happening overseas. With the global commodities markets priced in dollars, nations that import oil and natural gas will lose value in the exchange and effectively pay more. In Europe, where the war in Ukraine has already created a severe natural gas shortage, this is a disaster. The inflation rate in August was +10.1% in the EU and +9.9% in the U.K., and as winter approaches, energy prices are expected to rise further. The ECB hiked by 75 bps in September, the biggest single increase in its history, and signaled another 75 ahead for October. The September hike brought the ECB overnight rate from 0.00% to 0.75%. Clearly, they still have a long way to go, but they’re walking a fine line. Rate increases are designed to slow demand, and in doing so will eventually bring down inflation. However, the EU is already very close to recession. The U.K and China may already be in recession, and the U.S. is expected to enter recession at some point next year.

Foreign nations are hiking rates at an unprecedented pace and thereby ensuring a deeper recession . . . but there’s little choice. They need to keep their currency from weakening further and try to bring inflation down as best they can. Here in the U.S., the headline

consumer price index rose +0.1% in August, above the expected -0.1% decline and following an *unchanged* reading in July. On the surface, it wasn’t a terrible number, but almost all of the moderation was the result of the decline in gas prices. The majority of the CPI basket of goods continues to rise in price. On a year-over-year basis, CPI increased at an +8.3% pace, down from +8.5%, but above the +8.0% forecast. Unfortunately, it was much worse when food and energy prices were excluded. Core CPI was up +0.6% in August, doubling both the median forecast and the July increase. On an annual basis, the rate of core consumer inflation actually rose from +5.9% to +6.3%. If there were a single report to blame for the September spike in yields and the corresponding resolve of Fed officials to drive inflation lower, *this was it*.

On the labor side, the August employment report was still too strong. Nonfarm payrolls climbed by +315k in August and 5.8 million over the previous 12 months, bringing total payrolls back above the pre-pandemic high point, *although leisure and hospitality payrolls remain 1.2 million short of the February 2020 count*. This suggests that wage pressures will continue to mount in the service sector. Average hourly earnings rose +0.3% in August and +5.2% year-over-year. This is down from the cycle high of 5.6% in March, but job openings still outnumber job seekers by almost a 2 to 1 count. Fed officials have indicated they would like to see some of this labor slack disappear. So far, businesses have been reluctant to actually let workers go, but eventually job postings should drop.

Fed officials and central banks around the world are all on the same page, and the likelihood of global recession has ramped up significantly. Demand is expected to slow in the coming months, which will further test the Fed’s resolve. For now, it’s all about bringing inflation down, and that means additional rates hikes are queued-up (and priced-in) for November and December.

Investment Officers' Certification

This report is prepared for the City of Frisco (the "Entity") in accordance with Chapter 2256 of the Texas Public Funds Investment Act ("PFIA"). Section 2256.023(a) of the PFIA states that: "Not less than quarterly, the investment officer shall prepare and submit to the governing body of the entity a written report of the investment transactions for all funds covered by this chapter for the preceding reporting period." This report is signed by the Entity's investment officers and includes the disclosures required in the the PFIA.

The investment portfolio complied with the PFIA and the Entity's approved Investment Policy and Strategy throughout the period. All investment transactions made in the portfolio during this period were made on behalf of the Entity and were made in full compliance with the PFIA and the approved Investment Policy.

Disclosures & Disclaimers

As a courtesy to investors this information: (1) is provided for informational purposes only; (2) should not be construed as an offer to sell or a solicitation of an offer to buy any security; and (3) does not replace customer statements.

This report is designed to provide general information and is not intended to provide specific legal, investment, accounting, tax or other professional advice.

It is important to review and save all source documents provided by a product sponsor or brokerage firm which may contain notices, disclosures and other information important to you and may also serve as a reference. If conflicts between this report and sponsor reports or confirmations exist, the information provided by the product sponsors shall prevail. Fees and sales charges paid may not be reflected in the information.

The information and data contained herein is obtained from sources believed to be reliable but its accuracy or completeness is not guaranteed. Additionally, the information may contain assets held away from HTS, therefore investors should contact customer service or other representatives from the respective distributors or issuers to determine SIPC coverage for heldaway assets. HTS and HSAM do not guarantee the information contained herein or its accuracy or completeness regarding contributions, withdrawals, protected values. All information is subject to further review with client to validate final values.

It is not possible to directly invest in an index. Financial forecasts, rates of return, risk, inflation, and other assumptions may be used as the basis for illustrations. They should not be considered a guarantee of future performance or a guarantee of achieving overall financial objectives. Past performance is not a guarantee or a predictor of future results of either the indices or any particular investment. S&P rates the creditworthiness of individual bonds from: AAA highest to D lowest.

Investing in fixed income securities involves interest rate risk, credit risk, and inflation risk. Interest rate risk is the possibility that bond prices will decrease because of an interest rate increase. When interest rates rise, bond prices and the values of fixed income securities fall. When interest rates fall, bond prices and the values of fixed income securities rise. Credit risk is the risk that a company will not be able to pay its debts, including the interest on its bonds. Inflation risk is the possibility that the interest paid on an investment in bonds will be lower than the inflation rate, decreasing purchasing power.

Cash alternatives typically include money market securities and U.S. treasury bills. Investing in such cash alternatives involves inflation risk. In addition, investments in money market securities may involve credit risk and a risk of principal loss. Because money market securities are neither insured nor guaranteed by the Federal Deposit Insurance Corporation or any other government agency, there is no guarantee the value of your investment will be maintained at \$1.00 per share, and your shares, when sold, may be worth more or less than what you originally paid for them. U.S. Treasury bills are subject to market risk if sold prior to maturity. Market risk is the possibility that the value, when sold, might be less than the purchase price.

Investing in stock securities involves volatility risk, market risk, business risk, and industry risk. The prices of most stocks fluctuate. Volatility risk is the chance that the value of a stock will fall. Market risk is the chance that the prices of all stocks will fall due to conditions in the economic environment. Business risk is the chance that a specific company's stock will fall because of issues affecting it. Industry risk is the chance that a set of factors particular to an industry group will adversely affect stock prices within the industry.

Securities offered by HTS: (1) are not FDIC (Federal Deposit Insurance Corporation) insured; (2) are not bank deposits; (3) are not guaranteed by any bank or by any other federal government agency. None of the named entities are affiliates of HTS or HSAM. Hilltop Securities Asset Management (HSAM) is an SEC-registered investment advisor. Hilltop Securities Inc. (HTS) is a registered broker-dealer, registered investment adviser and municipal advisor firm that does not provide tax or legal advice. Member of FINRA & SIPC. HTS and HSAM are wholly owned subsidiaries of Hilltop Holdings, Inc. (NYSE: HTH) located at 717 N. Harwood St., Suite 3400, Dallas, Texas 75201, (214) 859-1800, 833-4HILLTOP.
